DEPARTMENT OF ROGNIDAN-VIKRUTIVIDNYAN

Rognidan-Vikrutividnyan is the groundwork of all the clinical subjects. The subject helps you to understand in depth the disease (Vyadhi-vidnyanam) & its pathogenesis (Samprapti Vidnyanam), the art & science of the clinical examination methods (Aatur or Rugna Parikshan Vidhi); the signs & symptoms or clinical features of the disease, the required investigations (Vyadhi pariksha vidhi) & the interpretation of their results as well. The subject deals with not only the diagnosis but also the prognosis (Sadhya-sadhyatwa) of any disease. Thus it renders the student to understand the philosophy as well as practicallity of vyadhi-vidnyanam.

We always strive to make the student to think, understand & learn the philosophy & the ethos of Rognidan & Vikrutividnyan. Our students shall be able to think & explain the etio-pathogenesis (samprapti) of newer diseases & also about other unexplained & unnamed diseases with the help of sound knowledge of "Nidan panchak" & Vyadhi Ghatak. Also they should be able to elaborate Samprapti of each disease with the help of different samhitas & to undertake a detailed comparative study of Ayurved & modern concepts of disease pathogenesis & clinical features. They should study & elaborate the Ayurvedic concepts of vyadhikshamatva, dhatwagnimandya etc. scattered in different samhitas.

We are having a very well equipped teaching pathology lab for students. Almost 35 students can work at a time and each student gets separate microscope to study.
